

Atlas - 25

1st carbon neutral self sufficient solar system, can operate as stand alone unit without mains power

Componants

Solar Collectors

Number of tubes 25 (1 x Atlas -15 +
1 x Teton-10 tube collector)

Photovoltaic Panel

16W mono-chystalline PV Panel

Pumpstation

Dual line Miebes pump station

Pressure relief valve

Prozeda Basic Controller

Controls a solar water system

Variable pump speed output

Includes two sensors

Displays full information

Easy to install

®PEKASOLar V / 25 litre

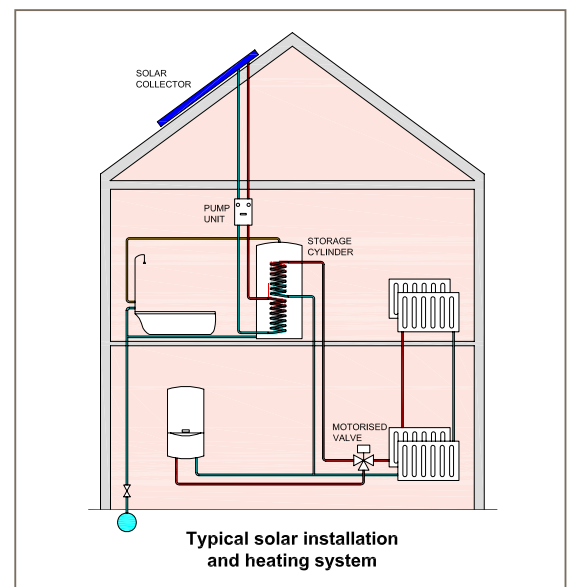

Heat Transfer liquid for high thermal load
(Heat Pipe Tube) solar installations premixed
1.2 propylene glycol

Expansion Vessel

The vertical series have a control panel
mounting bracket. All vessels incorporate a
replaceable rubber membrane which are
suitable for temperatures from 0° to 99°C.

Roof Mounting Kit

Easy installation roof mounting kit designed
not to be noticed - 4 brackets per panel

Built in
16 watt
PV panel

Atlas - 15
Assembled
with frame

+

Teton - 11
Assemble
with frame

Hot Water Specification

Size of vacuum tube	58 x 1800 mm
Number of Tubes	25
Dimension of collector	1270 x 2000 mm
Net weight	65 / 38 kg per panel
Minimum volume flow rate	50 litre's per hour
Recommended volume flow rate	150 litre's per hour
Maximum volume rate	300 litre's per hour
Maximum operating pressure	0.6Mpa
Water out put	105 - 150 litres
Water temperature	40 - 90°C

PV Specification

16W mono-chystalline PV Panel

Type of Fixing Kits

For flat roof installation	Frame construction*
For sloping roof installation	Fixing brackets *
* one type of fixing kit per installation
