

SC Module - 01 / 02 / 03

Suitable for use with single and dual line pumpstations

Prozeda are a well established German manufacturer of control systems for various markets. The company was formed in the 1980's to produce automated manufacturing control systems.

Prozeda began in the early 1990's to design and supply solar control systems to other system manufacturers.

The company is extremely well established in Germany and throughout Europe, but the products are marketed almost entirely under the name of other 'manufacturers' and distributors.

Prozeda Basic Controller

- Controls a single panel solar water system
- Variable pump speed output
- Includes two sensors
- Displays full information
- Factory preset with option to adjust parameters for individual systems
- Easy to install

Gives excellent display of the entire system, showing

- Tank temperature
- Collector temperature
- Pump speed
- Total hours run

Prozeda Energy Controller

Same functionality as Basic controller but with the addition of a flowmeter and extra sensor it will give the total quantity of heat produced in kW/hours

Prozeda Vision Controller

Same core functionality as Energy controller but can control up to two panels, two pumps or two storage tanks within 5 different system layout options.
